

AccessionIndex: TCD-SCSS-T.20121208.134
Accession Date: 8-Dec-2012
Accession By: Dr.Brian Coghlan
Object name: AGP cards
Vintage: c.199x
Synopsis: Plugin cards for the IBM PC AGP expansion bus.

Description:

Accelerated Graphics Port (AGP) is an expansion card bus introduced in 1997 for attaching video cards to a PC. It was originally designed as a supplement (and superset) of PCI for accelerated access graphics cards. The primary advantage of AGP is that it doesn't share the PCI bus, providing a dedicated high-speed point-to-point pathway between the AGP cards and the motherboard chipset. Since 2004, AGP was progressively phased out in favor of PCI Express (PCIe), which uses serial rather than AGP's parallel signalling.
