Object name: Samsung Galaxy S4 Zoom smartphone/camera

Vintage: 2013

Synopsis: Superb combination of 10X optical SLR camera and Android mobile smartphone, model SM-C101. S/N: CN1D701B1PW.

### **Description:**

The Galaxy S4Zoom smartphone/camera, introduced by Samsung in 2013, was a superb combination of an Android mobile smartphone with a 10X optical 16MP BSI-CMOS SLR camera (24–240mm 35mm-equivalent) with f/3.1-6.3 lens, built-in optical image stabilizer, standard xenon flash, and both auto and manual camera control, that was capable of taking video in 1080p 30fps (full-HD), 720p at 60fps, or slow motion video at  $768 \times 512$  pixels at 120fps. It also had a 1.9MP camera for video calls. See Figure 1 for the specification [1][2][3].

This device used a Pega-Dual +XMM6262 system-on-a-chip (SoC), including a 1.5GHz dual-core ARM Cortex-A9 CPU (multi-issue superscalar, out-of-order, with speculation and 4-way associative caches [4]) with a Mali-400 GPU. The SM-C101 was the base model, but there was an LTE 4G variant, the SM-C105.

The smartphone portion was comparable to the S4mini, with 8GB of memory, 1.5GB of RAM, 802.11 a/b/n/g WiFi, Bluetooth 4.0, and GPS, a micro-SIM slot, a micro-SDXC card slot, a type B microUSB port, and a Super-AMOLED screen showing  $960 \times 540$  pixels, protected by the latest durable glass, Gorilla Glass 3. It was released with the Android 4.2.2 (*JellyBean*) software [5], and was upgradeable to Android 4.4.2 (*KitKat*) [6], but badly suffered from the S4 platform's inability to be upgraded beyond 4.4.2. The behaviour was identical to that of the S4mini, but with a better battery life, while the mobile benefited from the 16MP SLR camera, and vice-versa. Reviews were favourable as a camera, less so as a smartphone, since it was not comfortable in pockets and awkward to use upright as is usual for a phone [7]. Users, however, were more enchanted, and this was reflected in the fact that although Samsung supplied an official cover for the S4 Zoom [8] that included auto-standby when the lid closed, alternative covers quickly became available from other sources that were more suitable for photographers, including the Remax soft cover included with this item. Perhaps also reflecting this, Samsung manufactured a special portable battery charger, the EP-B740CE, purportedly to ensure the S4 Zoom never ran out of power. But of course it required 5V power from a USB charger, which the S4Zoom could be directly charged from, so it was more sensibly used to charge a spare battery for use in field trips if the S4 Zoom's battery ran out of power. The S4 Zoom used a specific 2330mAh Li-Ion battery that gave up to 570 hours of standby time and up to 13 hours of talk time, rechargeable at 5V via its USB interface. Despite the size of the battery, the S4 Zoom was surprisingly compact, only 126 x 64 x 15mm in size, but was quite heavy, weighing 208g (almost twice the 107g of the S4mini).

In June 2014 a successor, the Galaxy K Zoom, was introduced, but sadly a year later Samsung began withdrawal from the camera market, finally withdrawing in 2017.

Many thanks to Brian Coghlan for donating this very interesting item.
