

AccessionIndex: TCD-SCSS-V.20121208.359

Accession Date: 8-Dec-2012

Accession By: Prof.J.G.Byrne

Object name: The Dublin philosophical journal and scientific review vol.I

Vintage: c.1825

Synopsis: Mar-Nov 1825.

Description:

Short descriptive text ...

For the front and rear covers, title pages, table of contents, selected content, etc, see Figure 1 onwards below.

The subject-matter, to which the pages of this Journal are destined, is Science in all its various branches and practical applications. The papers of which it is composed may be ranked under one or other of the following heads. 1st, Original contributions to the various departments of science: this class constitutes the principal part of each number. 2dly, Reviews of recent scientific publications: and 3dly, Extracts from the labours of learned societies and occasional scientific works of eminence, together with a summary view of the recent additions to Science in its several branches.

The natural resources of Ireland, and particularly her mineral wealth, have of late deeply engaged the attention of the public; and should the measures that have been already adopted for their development, meet with ultimate success, as we have every reason to hope from the vigour and zeal with which they are pursued, a change may be effected in the condition of this country, of which no one, perhaps, can now foresee the extent. In the hope, therefore, that any light which can be shed on these subjects, interesting as they are even in a speculative point of view, may derive additional value from the illustration of their practical tendency, the Editors of this Journal mean to embrace every opportunity of directing the attention of their readers to matters connected with the local interests of Ireland; and should they, by their exertions, be found to have contributed any aid, however feeble, to the great task of awakening her dormant powers, they will deem their labours more than sufficiently repaid.

The present Number closes the First Volume. It had been originally intended to publish at half-yearly intervals, the two numbers of each year forming a large-sized octavo volume; in compliance, however, with the wishes and advice of many of their readers, supported by reasons which their own experience has taught them to appreciate, the Editors have determined henceforth to publish quarterly, and in smaller numbers. The times of publication will be the middle of the months of February, May, August, and November; these being periods intermediate to those at which the quarterly Scientific Journals of England and Scotland appear. The next Number will be published in February, 1826.

X		CONTENTS.	
ART.			Page
	CAPTAIN SABINE's experiments for determining the figure of the earth, &c.		427
XIV.	Account of a human body in a singular costume, found in a high state of preservation in a bog on the lands of Gallagher, in the county of Galway. By GEORGE PETRIE, Esq.		433
XV.	On the supposed magnetic influence of the Iron of ships on the rates of Chronometers. Extract from CAPT. SABINE's Experiments on the figure of the Earth, &c.		436
XVI.	Observations on a few Trees and Shrubs naturalized under the climate of Ireland, continued from the former Number, together with notices of several hardy Trees and Shrubs of large dimensions. By JAMES TOWNSEND MACKAY, A. L. S. M. R. I. A.		437
XVII.	A selection of questions proposed to the candidates for honors at the examinations held in the University of Dublin in October, 1825,		441
XVIII.	Meteorological Table for the nine preceding months. Communicated by THOS. H. ORPEN, M. D. The observations made in South Frederick-street,		445
XIX.	SCIENTIFIC INTELLIGENCE.		
	ASTRONOMY.—1. Local Attractions. 2. Opposite effects of a change in the density of the air, as affecting the going of a clock. 3. The double star 61 Cygni,		449-450
	OPTICS.—1. Iridescence of clouds. 2. New theory of Vision, by C. J. LEHOT. 3. On the light of halos. 4. Phenomena of Mirage observed at Leith, by H. H. BLACKADDER, Esq.		451-453
	ELECTRICITY.—1. On the electricity of gases. 2. On the energy of electro magnetic apparatuses. 3. Luminous meteor. 4. Electrical gale.		453-455
	MAGNETISM.—1. On the magnetism imparted to iron bodies by rotation, by PETER BARLOW, Esq. 2. On the alteration in the magnetism of an iron plate, occasioned by a rotation on its axis, by J. H. CHRISTIE, Esq. 3. M. ARAGO's magnetic experiments. 4. Further experiments on the magnetism developed during rotation.		455-459
	CHEMISTRY.—1. New compounds of Hydrogen and Carbon. 2. On some compounds of Tungsten. 3. Separation of Titanic acid from iron. 4. Russian Platinum. 5. Vegetable principle in Saponaria officinalis. 6. Melaina. 7. Hygrometric action of substances impregnated with oil. 8. New Hygrometer. 9. Soda from Fucus buccinalis near the Cape. 10. Artificial cold. 11. Phosphorescence of potatoes. 12. Detection of minute quantities of phosphate of lime. 13. Supposed anomaly in the solubility of magnesia. 14. Iodine in a mineral. 15. Iodine in mineral waters. 16. Method of obtaining URAG, or carbonate of soda. 17. Action of lime on alcohol. 18. Rectification of Alcohol in the cold. 19. Meteoric iron. 20. Inspiration of protoxide of azote. 21. Method of obviating the bad effects of Chlorine. 22. Urinary calculus from a hog. 23. Movements of the barometer. 24. Fall of a meteoric stone at Nantgomery, Maryland. 25. Fogs of the Polar seas. 26. Ancient Roman glass,		459-470
	ANATOMY, PHYSIOLOGY, AND ZOOLOGY.—Analysis of the Physiological labours of the Royal Academy of Sciences of Paris for the year 1824, by M. LE BARON CUVIER,		471-478

xi		CONTENTS.	
ART.			Page
	Fossil deer of Ireland.—On the action of the pneumo-gastric nerves (eighth pair, or par vagum) in the process of digestion, by MM. BRESCHET and EDWARDS.—Habits of Hyenas.—On the influence which the condition of parents has in determining the sex of their offspring,		479-490
	MISCELLANIES.—1. On the intensity of the radiation of heat in the atmosphere, at heights and at the level of the sea. 2. On the depth at which the water of the ocean within the tropics is found at the temperature of its greatest density. 3. Experiments on the compression of air and of gases. 4. Experiments on the propagation of sound. 5. Preservation of Anatomical preparations. 6. Globules of water in Amethyst. 7. Fossil whale. 8. Wolves. 9. Hazel nuts found in a singular state. 10. Diurnal variation of the needle,		490-494
